RENEWABLE ENERGY LIKE NEVER BEFORE

Connect to the largest wind
and solar plants in South Africa

For the first time ever, South African businesses of all sizes can now access renewable energy from utility-scale solar and wind plants, without any financial, technical or administrative barriers.

To date, accessing renewable energy at scale has only been viable for large industrial users like mines and smelters, businesses with long-term energy strategies and the financial muscle to enter into Power Purchase Agreements (PPAs) with Independent Power Producers (IPPs). This has left many businesses, from corporates and mid-sized firms to SMMEs and informal sector enterprises unable to participate at scale in South Africa's transition to renewable energy.

However, these businesses account for between 15% and 20%¹ of total electricity consumption across South Africa. Creating access to renewable energy for this segment is critical for economic growth and positioning South Africa as a leader in the global energy transition.

ENERGY DELIVERED TO YOUR FRONT DOOR

Energy is wheeled to businesses using the national grid

Rather than installing technology at your business, Ampli uses your existing connection to deliver cheaper, greener electricity, overnight.

What is energy wheeling?

Businesses were not designed to be generators of renewable energy. For many corporates and SMMEs, generating renewable energy onsite can be costly and seldom moves the dial when it comes to limiting exposure to expensive and dirty electricity.

Wheeling allows businesses to access energy from utility-scale wind and solar plants in remote parts of South Africa. These plants are developed in regions where solar and wind resources are best, generating kilowatt-hours at the lowest possible cost. The energy is 'wheeled' to your business across the national grid to replace your consumption of dirty electricity. Ampli handles the entire process and ensures that businesses are completely protected from the operational and financial complexity associated with energy wheeling.

GET PAID FOR SWITCHING TO RENEWABLES

Ampli connects
businesses to
renewable energy,
and pays them for it.

South Africa has some of the best solar and wind resources in the world. This makes renewable energy cheaper than electricity generated from coal-fired power stations. However, the complexity of traditional wheeling frameworks makes accessing these savings difficult, if not impossible.

With Ampli, accessing renewable energy is as easy as getting power from your utility. There are no administrative, contractual or physical changes to the way your business receives and is billed for electricity.

Simply switch over to renewable energy with Ampli and get savings paid directly into your bank account each month. It's that easy.

You get all the credit

For every one megawatt-hour of renewable energy produced, one Renewable Energy Certificate (REC) is created. RECs are used to verify the origin of renewable energy that is produced and allows the consumer of such energy to benefit from its environmental credentials. Businesses procuring renewable energy can use these RECs to offset Scope 2 carbon emissions². With global and local carbon tax policies imminent, RECs will play an important role in reducing future carbon taxes applicable to your business.

Ampli removes all the complexity that comes with RECs. Your renewable energy comes with your REC, in your name, no questions asked.

²Indirect greenhouse gas emissions from purchased energy, including electricity

**NO FEES,
NO RISKS,
NO HASSLES,**

just monthly
cashback for
going green.

Forget pay-as-you-go power, here you get-paid-as-you-go, and it's clean

Welcome to a new era of renewable energy. With Ampli, there are no security deposits, no activation fees, no administration costs, no long-term contracts and no termination penalties. Ampli makes renewable energy easy, you won't even know we're here.

Why choose Ampli?

- 01 | Quick Sign-Up:** Get started in minutes with our easy online registration. Complete a simple Ampli Energy Membership Form. No lengthy contracts or complicated paperwork.
- 02 | No Upfront Costs:** Enjoy the benefits of renewable energy without any initial investment.
- 03 | No Security Deposit:** It's obligation-free energy.
- 04 | No Ongoing Fees:** We cover all costs, from metering and data sharing to the costs of connecting renewable energy plants to the national grid.
- 05 | Monthly Cash Payments:** Receive cash payments directly into your bank account at the end of each month.
- 06 | Complete Flexibility:** Cancel anytime with no obligation. All we need is 30 days' notice.

GET STARTED

01

Get an indicative Renewable Energy Savings Statement from Ampli: If you haven't already done so, provide us with a single electricity bill and we'll show you what an Ampli membership can do for your business.

02

Complete your Ampli Energy Membership Form: Available on request from our friendly service team at **AmpliSupport@discovery.co.za**

am
ENERGY

03

If needed, contact us for a free meter installation: Or allow Ampli to integrate directly with your existing electricity meter.

04

Enjoy the benefits of clean energy – with money back in your pocket. Your Ampli savings will be paid directly into your bank account each month.

ampli FAQs

What is Ampli?

Ampli is a **no risk, no fee, no hassle** renewable energy solution that aims to replace the majority of your business's electricity consumption with green energy sourced from large-scale wind and solar farms. This energy is delivered through the national grid via a process called wheeling.

Will Ampli affect my current electricity supply?

No. Your electricity supply remains exactly the same. Ampli integrates seamlessly with your existing infrastructure and meter — no physical changes or disruptions occur.

What is 'wheeling' and how does it work?

Wheeling is the process of delivering electricity generated at one location in South Africa (e.g. a solar or wind farm) to a user at another location through the national grid. By delivering renewable energy through your existing connection, wheeling overcomes the physical and financial limitations associated with generating renewable energy at your business. Ampli handles all wheeling logistics — you simply enjoy the benefits of clean, discounted power.

Do I need special infrastructure to participate?

No. If your business has an electricity meter capable of tracking time-of-use consumption, Ampli will integrate directly. If not, Ampli will install a compliant meter free of charge.

Will I be charged for the meter installation or any other service?

No. Ampli covers all installation, operational, and administrative costs. There are no sign-up fees, monthly fees, or cancellation fees — ever.

What happens if I want to cancel?

You can cancel at any time by giving 30 days' notice starting on the 1st day of the next calendar month. Ampli reserves the right to withhold the final month's savings, and the installed Ampli meter will be removed at no cost to you.

Do I still get billed by Eskom or my municipality?

Yes. Your existing electricity bill remains unchanged. Ampli operates alongside your current billing setup and pays your savings directly to you at the end of each month.

Do I need to update my Electricity Supply Agreement (ESA) with my current provider?

No. Ampli's market-first approach to energy wheeling allows businesses to run on renewable energy without interfering with their existing ESA.

What if I already have solar panels on-site?

No problem. Ampli simply replaces the remaining demand that would otherwise be met by Eskom or your municipality. Your on-site generation and Ampli's wheeled power work in harmony.

Will I be protected from loadshedding?

No. Since loadshedding is implemented at the distribution substation, wheeled energy does exempt businesses from loadshedding. However, you'll still receive clean energy when the grid is active.

Do I get access to renewable energy certificates (RECs)?

Yes. All RECs associated with your Ampli-delivered energy are retired in your name. Ampli does not on-sell or trade RECs — ensuring your sustainability credentials remain yours.

When will I start receiving my savings from renewable energy?

Forget about the usual long waiting periods before you receive your energy. Ampli electrons are flowing through the national grid as we speak. After you have completed your Ampli Energy Membership Form, we aim to turn on your supply of renewable energy in the next calendar month. Ampli aims to pay you your monthly savings from renewable energy within two weeks of the month end.

Do I have to order electricity each month?

No. Ampli aims to replace the majority of your electricity consumption with renewable energy each month. We'll contact you monthly to let you know how much renewable energy was delivered to your business and how much you saved.

Is there a fixed time of day that I'll receive renewable energy?

Ampli delivers renewable energy throughout the day and night. You don't need to track delivery times as savings are fixed regardless of when the energy is supplied.

Do I need to be on a time-of-use tariff?

No. But your meter must be able to track consumption on a time-of-use basis. Ampli will install an approved meter for free if needed.

What if my business is billed by a landlord?

We will ask you to connect us to your landlord so that we can sign up the whole facility.

What if my business is billed by a municipality in poor standing with Eskom?

If your business is billed by a municipality in poor standing with Eskom, unfortunately you will not be eligible for Ampli today. However, we are optimistic that this could change. Please feel free to sign up and reserve your spot so that you're at the front of the queue and we'll reach out should things change.

What do I receive each month?

At the end of every month, you'll receive a statement showing:

- Total renewable energy delivered (kWh)
- Total savings in Rands
- Total CO₂e avoided (kg)

What happens if I don't consume any electricity in a given month?

There is no requirement to take delivery of a minimum amount of energy from Ampli. If you don't use any electricity, we won't deliver any to you. This completely protects you from take-or-pay obligations traditionally included in wheeling contracts.

Will I ever pay more than the Eskom price?

No. South Africa's rich solar and wind resources mean that renewable energy can be generated at a lower cost than electricity generated from coal-fired power stations. Ampli will never charge a premium for renewable energy.

What obligations do I have when becoming an Ampli member?

We'll need you to provide your business banking details and give us access to the data from your electricity meter. With that in place, the only ongoing requirement for Ampli members is to let us know of other renewable energy wheeling agreements entered into. This is to avoid double-counting of RECs and to ensure that the savings from renewable energy being fed into the national grid are not counted twice.

What do I need to do to join?

Simply sign the Ampli Energy Membership Form available upon request from AmpliSupport@discovery.co.za. That's it. No contracts, no deposits, no obligations.
